

Global AI Governance Interoperability Observatory

Mission:

Supporting international AI governance cooperation through interoperability assessment, governance analytics, and decision support tools.

Initiative Overview

Global AI Governance Interoperability Observatory (AIGO) is an independent initiative that develops practical tools, methodologies, and analytics to support international AI governance cooperation. Through an AI Governance Interoperability Index, Governance Analytics Dashboard, and AI Governance Copilot, the initiative helps stakeholders compare governance frameworks, identify interoperability gaps, and strengthen evidence based decision making for responsible and trustworthy AI. AIGO aims to contribute to global dialogue, capacity building, and multi stakeholder cooperation in support of inclusive and effective AI governance.

AI Governance Interoperability Index (screenshots)

Key findings:

The index provides a structured approach to comparing AI governance frameworks and identifying opportunities for greater international interoperability.

I'll help you capture the key details of your governance issue. Please answer the following structured questions.

1. What is the AI use case or governance issue?

2. What sector does this primarily relate to?

3. What type of institution is involved?

4. What frameworks or standards are in scope?

5. What is the main governance concern area?

6. What is the intended output from this analysis?

Public sector AI use in service delivery

Government Agency

OECD AI Principles, EU AI Act, UNESCO, ISO/IEC 23894

Data Governance

Policy coordination brief and interoperability recommendations

Thank! I've captured your inputs. Shall I proceed with risk assessment?

Yes, continue

2 Risk Assessment

Overall Risk Level

High Risk

Overall Assessment

Multiple high-impact risk drivers identified across key dimensions.

Key Risk Summary

The use of AI in public sector service delivery involves sensitive personal data and decision impacts on individuals. Weakness in data governance, transparency obligations, and accountability mechanisms across jurisdictions create significant interoperability and coordination challenges.

Required Safeguards

Data privacy & impact assessment (DPIA)

Data governance alignment and minimization

Transparency and access to affected individuals

Accountability of institutional leadership

Cross-border data transfer safeguards

Stakeholder engagement and public consultation

4 Coordination Brief

AI Governance Coordination Brief

Public Sector AI Use in Service Delivery

Date: May 19, 2025

Prepared for: Global Secretariat

Classification: Internal Use

Issue Summary

Use of AI in governing monetization operations in public service delivery may create transparency, fairness, accountability, and cross-border interoperability concerns.

Frameworks Considered

OECD AI Principles

UNESCO Recommendation on the Ethics of AI

ISO/IEC 23894 (AI - Risk Management)

Main Risk Drivers

Processing of sensitive personal data

Automated decision-making with individual impact

Variability in governance expectations across jurisdictions

Limited transparency and explainability in some use cases

Coordination Priorities

Align on key service case assessment and data subject rights

Strengthen transparency and explainability in public disclosure

Harmonize accountability via robust stewardship

Enable trusted cross-border data flows

Promote capacity building and knowledge sharing

Recommended Actions

Establish a joint working group on public sector AI governance

Develop a common risk classification taxonomy

Create model clauses for cross-border data transfers

Publish interagency policy guidance and implementation toolset

Monitor progress through periodic peer reviews

Conceptual multi-agent framework for AI governance interoperability and coordination

Copilot Agent Screenshot 1: Test Prompt

Global AI Governance Coord > Assess this as a general AI governance case. Do not

Auto

Assess this as a general AI governance case. Do not assume a specific country or legal framework.

Use case: An AI system is used by a public agency to support eligibility screening for social protection benefits.

Sector: Public administration and social protection.

Institution type: Government agency.

Main concerns: Fairness, transparency, human review, appeal mechanisms, accountability, data quality, and public trust.

Please provide:

1. Risk level

2. Main risk drivers

3. Interoperability gaps

4. Gap severity

5. Recommended safeguards

6. Coordination priorities

7. Human review requirement

8. Responsible use note

Global AI Governance Coord

AI Governance Assessment – Social Protection Eligibility Screening

1. Issue Summary

An AI system is used by a government agency to support eligibility screening for social protection benefits. The system may influence access to essential public services and entitlements.

2. Context and Scope

Sector: Public administration and social protection

Institution type: Government agency

Use case: Decision-support (or potentially semi-automated) eligibility screening

Primary concerns: Fairness, transparency, human review, appeals, accountability, data quality, public trust

3. Risk Level

Classification: High Risk

Rationale:

Direct impact on access to public benefits and essential services

Potential to affect economic security and welfare

Involves vulnerable populations

Risk of automated exclusion or incorrect denial

Message Copilot

AI-generated content may be incorrect

Copilot Agent Screenshot 3:

Global AI Governance Coord > Assess this as a general AI governance case. Do no

Auto

4. Main Risk Drivers

A. Fairness and Bias

- Historical or incomplete data reinforcing **systemic exclusion**
- Disproportionate impact on marginalised or under-documented populations
- Proxy variables indirectly encoding sensitive characteristics

B. Transparency and Explainability

- Limited ability of applicants or staff to understand:
 - Why a case was flagged or rejected
 - How criteria were applied
- "Black box" decision support undermining procedural fairness

C. Human Oversight Gaps

- Over-reliance on system outputs (automation bias)
- Insufficient capacity for meaningful human review
- Pressure to process cases quickly reducing scrutiny

D. Appeal and Redress Limitations

- Lack of clear, accessible appeal mechanisms
- Decisions difficult to contest due to limited explainability
- Asymmetry between system sophistication and user understanding

E. Accountability Ambiguity

- Unclear responsibility across:
 - Agency decision-makers

Message Copilot

AI-generated content may be incorrect

Copilot Agent Screenshot 3:

Global AI Governance Coord > Assess this as a general AI governance case. Do no

Auto

5. Interoperability Gaps

1. Definition Gap

- Inconsistent classification of the system as:
 - Decision support vs automated decision-making
- Impacts applicable safeguards and oversight levels

2. Risk Classification Gap

- Different internal units may assess risk differently (IT vs policy vs legal)
- Underestimation of risk if framed as "support tool"

3. Accountability Gap

- Lack of clear allocation of responsibility across:
 - Policy owners
 - System operators
 - Data providers
 - Vendors

4. Data Governance Gap

- Inconsistent standards for:
 - Data accuracy checks
 - Data updates and ownership
 - Data linkage across registries

5. Technical Standards Gap

- No harmonised approach to:
 - Bias testing

Message Copilot

AI-generated content may be incorrect

Copilot Agent Screenshot 4:

6. Gap Severity

→ Classification: Significant (approaching Critical)

Why:

- Direct implications for **rights, entitlements, and livelihoods**
- Weaknesses in appeal, explainability, or accountability can lead to **systemic exclusion**
- Public sector deployment increases **scale and impact**

Escalation to **Critical** if:

- Fully automated decisions are made without human review
- Appeals are ineffective or inaccessible
- Data quality issues are widespread

7. Recommended Safeguards

A. Governance and Oversight

- Conduct **AI impact/risk assessment** prior to deployment and periodically thereafter
- Establish clear **accountability mapping** (roles and responsibilities across lifecycle)
- Require **vendor transparency and documentation**

B. Fairness and Bias Mitigation

- Perform **bias testing across demographic and socio-economic groups**
- Use representative and validated datasets
- Implement **fairness monitoring dashboards**

C. Transparency and Explainability

Message Copilot

AI-generated content may be incorrect

Copilot Agent Screenshot 4:

8. Coordination Priorities

1. Risk Governance (Highest Priority)

- Formalise classification as high-risk use case
- Integrate into institutional risk management frameworks

2. Institutional Coordination

- Align roles across policy, IT, legal, and operational teams
- Integrate appeals bodies and oversight units

3. Data Governance

- Strengthen cross-agency data standards and validation processes

4. Technical Standards

- Develop consistent methodologies for:
 - Bias testing
 - Performance evaluation
 - Explainability

5. Public Trust and Accountability

- Transparency strategy and communication framework
- Strengthening grievance and redress mechanisms

6. Capacity Development

- Train staff in:
 - AI interpretation

Message Copilot

AI-generated content may be incorrect

Copilot Agent Screenshot 5:

[Global AI Governance Coord](#) > Assess this as a general AI governance case. Do no

Auto ▾   ...

9. Human Review Requirement

→ Mandatory and Continuous

Required at:

- **Design stage:** risk assessment, system objectives
- **Pre-deployment:** validation of fairness, reliability, data quality
- **Operational use:** human review for all eligibility decisions, especially negative outcomes
- **Appeals stage:** independent human adjudication
- **Periodic review:** governance, performance, and impact audits

Required expertise:

- Social policy experts
- Legal and administrative law specialists
- Data governance and privacy professionals
- Technical AI auditors

10. Responsible Use Note

This AI system operates in a **high-impact public sector context affecting access to essential benefits**. It should be used strictly as a **decision-support tool**, not as a replacement for human judgment.

Key principles:

- Maintain **human accountability at all times**
- Ensure **fair and equitable access to benefits**
- Guarantee **meaningful transparency and contestability**
- Prevent **automation bias and unjust exclusion**

Potential Contributions to the AI Governance for Humanity Lab

Areas of contribution:

- AI governance interoperability research
- Comparative policy analysis
- Governance readiness assessment
- Capacity-building tools
- Decision-support prototypes
- Multi-stakeholder governance dialogue

Alignment:

- AI Governance Cooperation
- Global Digital Compact
- Responsible AI
- Capacity Building
- International Cooperation
